# Flash - Publish

Step 1   To create the different formats, go to the File > Publish Settings (**A**).
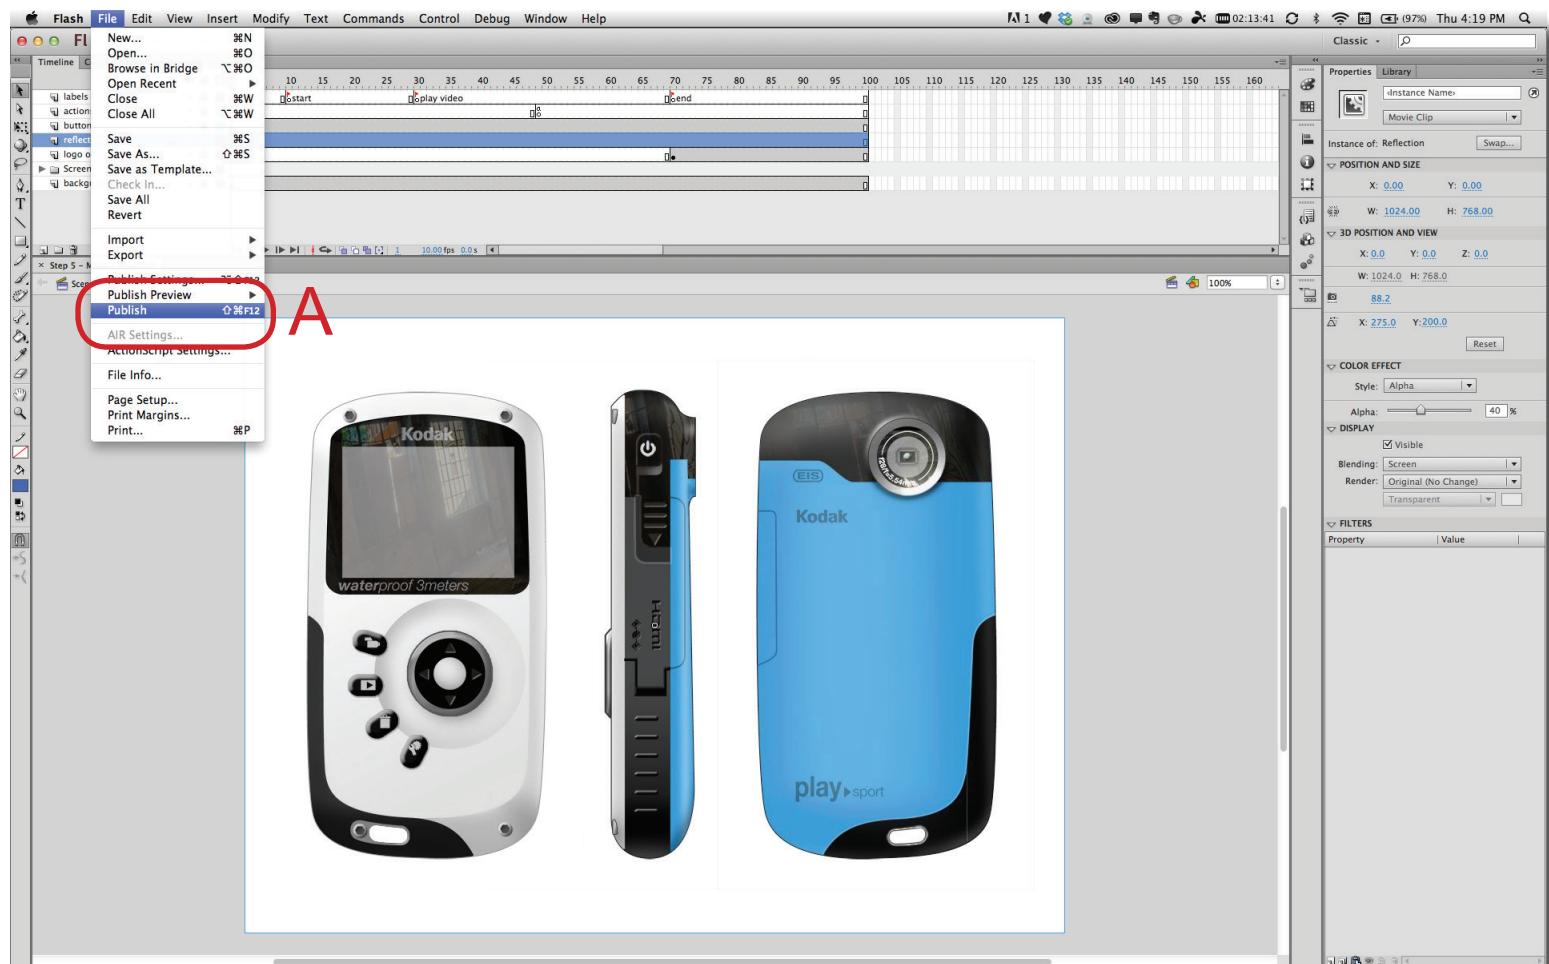

Flash - Publish

Step 2

To export to a different or multiply format, select the formats in the Publish section to the left (**A**). Each format can be given a different name by highlighting the format and then changing the name in the Output file box (**B**). The SWF format has additional settings under the Advance tab. One that might be import is the "Include hidden layers" (**C**) if you have turn off the visibility of layers during editing.
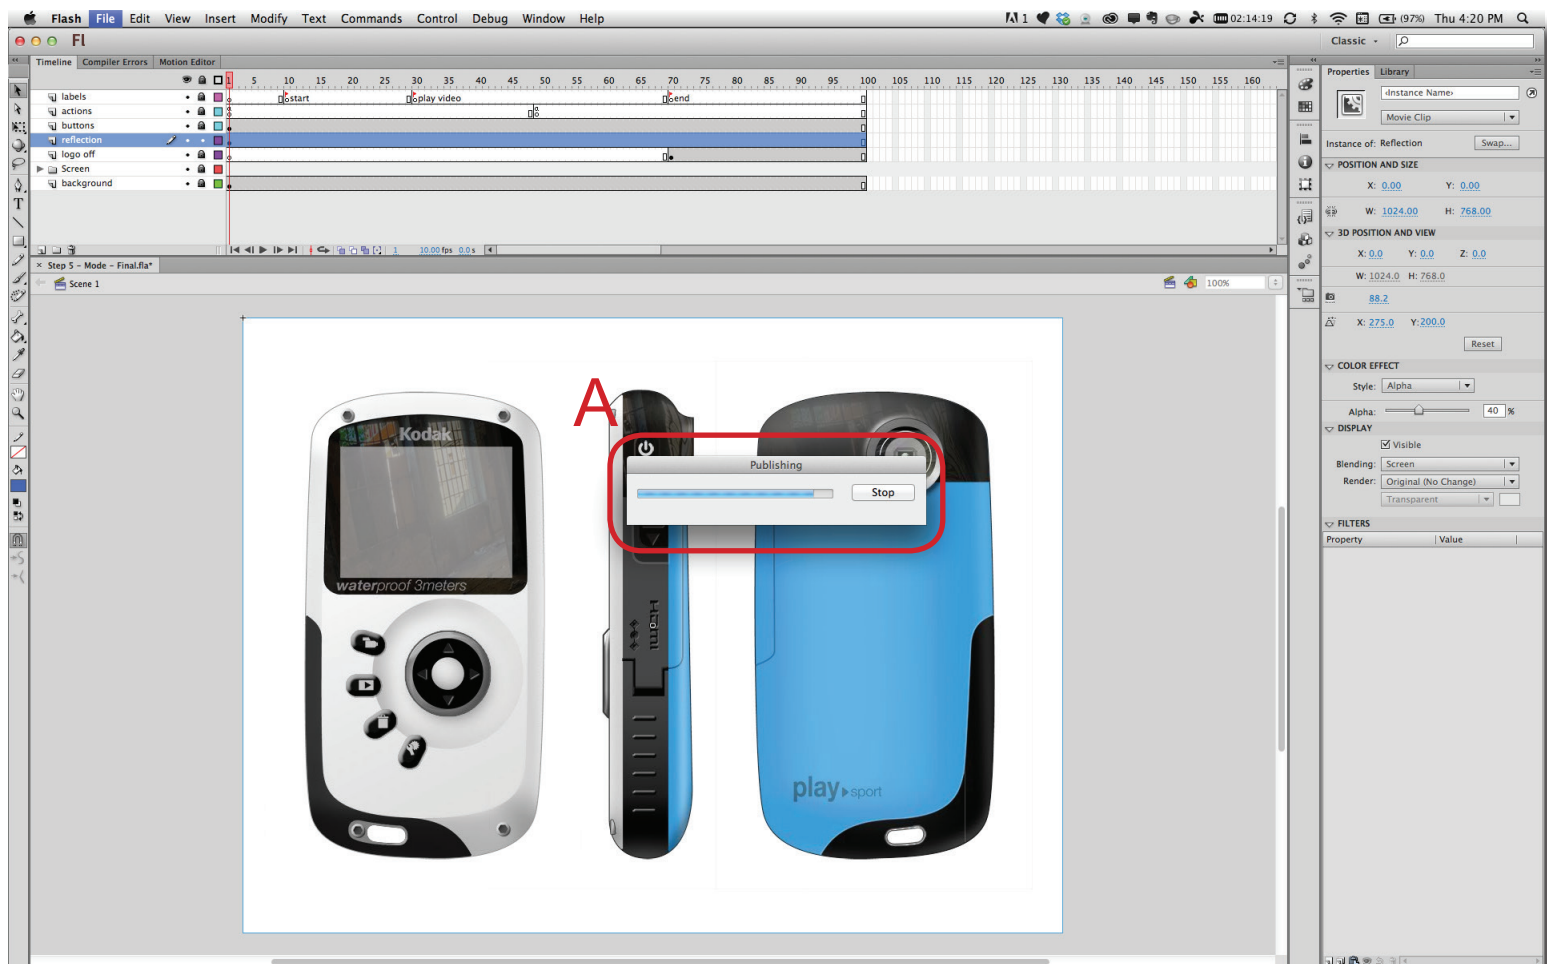

Flash - Publish

Step 3 If you need to republish the files, simple go to File > Publish. (**A**). All the formats selected in the Publish Settings dialogue box will be republished.

Step 5 This image indicates the different images that should me submitted. At a minimum, it should include: FLA, Mac & Window Projector (**A**) If the project includes a video, then include either the video folder or video file (**B**). On a Windows machine, it will not publish a Mac projector. Submit the SWF file instead (**C**).
